

TÈAS joins COMI Group

We are pleased to announce that in June 2018 TÈAS joined COMI Group, transferring all its activities and resources into the new company COMI-TÈAS.

Through the integration of TÈAS knowledge and experience with COMI Group technologies and sales/service network, the new company aims to establish itself as a global leading partner for automation projects.

COMI-TÈAS will focus on providing customized turn-key solutions, from feasibility to start-up and commissioning, for:

- Household Appliances production lines of structural components of refrigerators (cabinet panels, doors, wrapped plastic/aluminum inner-liners, evaporator, condenser), washing machines (drums, cabinets, assembly) and cooking devices (oven cavity, cabinets, external doors gluing) involving sheet metal working processes such as bending, flanging, punching
- Fibers automation lines of glass fibers and glass/mineral wool, capable to guarantee the reliability and cost effectiveness of doffing, handling, transportation, packing, pallet and storage processes
- Laser working units replacing the conventional mechanical cutting and fastening processes with integrated CO2 laser cutting technology and fibers laser welding.

COMI Group is delighted to be able to offer by now its existing clients the wider range of machinery & services and is looking forward to developing new relationships with the extended client base.

About COMI Group

COMI is an industrial machinery manufacturer and new technologies integrator, holding a global leadership position in thermoforming machines employed in the manufacturing of refrigerators inner liners and doors gained with more than 1300 units installed all around the world. Established in 1973, COMI is today a diversified group capable to design and manufacture standard and special machines:

- Thermoforming machines, in-line as well as single station
- Thermoforming molds
- Compression and Injection presses
- 5 Axis CNC Milling machines
- 3-5 Axis WaterJet cutting machines
- 5 Axis Laser cutting systems

marketing its innovative solutions mainly in Household appliances, Bathtubs & Pools, Automotive, Aerospace, Marine sectors.

Thanks to its Engineering Department COMI also integrates robot, laser and other new technologies in customized working units.
